THE METHODS OF KEEPING YOU COOL - INSIDE & OUT

Along with water, rest and shade, experts recommend Cooling PPE as a simple way to maintain safe body and skin temps throughout the shift. And with advanced technologies putting the chill on full blast, keeping cool has never been... well, cooler. **Chill-Its Cooling Technologies** are engineered to make sure workers have a stay-cool solution in any indoor or outdoor inferno.

WET EVAPORATIVE

Instantly activates with water and airflow for up to 4 hours of cooling

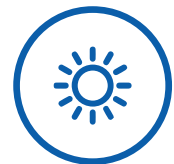

DRY EVAPORATIVE

Fill with water and add airflow for up to 3 days of 100% dry cooling

PHASE CHANGE

Low-profile charge packs do not require airflow for effective cooling

SUN PROTECTION

Fabric accessories shade the face and neck for protection against sun

THE 4 METHODS OF EVAPORATIVE COOLING

1 // PVA

Absorbing like a sponge, hyper-evaporative Poly Vinyl Alcohol (PVA) holds the most water for maximum cooling power while remaining mostly dry to the touch.

2 // MICROFIBER

Ultra-soft, absorbent and moisture-wicking, microfiber is an always-on double threat - comfortably absorbing and wicking sweat when dry, refreshingly cool when wet.

3 // ACRYLIC POLYMERS

When soaked in cold water, super-absorbent acrylic polymers plump up with moisture to deliver extended cooling relief.

4 // EMBEDDED POLYMERS

Similar to acrylic polymers, embedded polymers absorb cold water to deliver the same prolonged cooling with less of the bulk.

DID YOU KNOW? ONCE INTERNAL BODY TEMPS REACH 40°C IT ONLY TAKES 30 MINUTES TO CAUSE BRAIN DAMAGE... OR WORSE.
