THE METHODS OF KEEPING YOU COOL - INSIDE & OUT

Along with water, rest and shade, experts recommend Cooling PPE as a simple way to maintain safe body and skin temps throughout the shift. And with advanced technologies putting the chill on full blast, keeping cool has never been... well, cooler. **Chill-Its Cooling Technologies** are engineered to make sure workers have a stay-cool solution in any indoor or outdoor inferno.

WET EVAPORATIVE

Instantly activates with water and airflow for up to 4 hours of cooling

DRY EVAPORATIVE

Fill with water and add airflow for up to 3 days of 100% dry cooling

PHASE CHANGE

Low-profile charge packs do not require airflow for effective cooling

SUN PROTECTION

Fabric accessories shade the face and neck for protection against sun

THE 4 METHODS OF EVAPORATIVE COOLING

- 1 // PVA**
Absorbing like a sponge, hyper-evaporative Poly Vinyl Alcohol (PVA) holds the most water for maximum cooling power while remaining mostly dry to the touch.
- 2 // MICROFIBER**
Ultra-soft, absorbent and moisture-wicking, microfiber is an always-on double threat - comfortably absorbing and wicking sweat when dry, refreshingly cool when wet.
- 3 // ACRYLIC POLYMERS**
When soaked in cold water, super-absorbent acrylic polymers plump up with moisture to deliver extended cooling relief.
- 4 // EMBEDDED POLYMERS**
Similar to acrylic polymers, embedded polymers absorb cold water to deliver the same prolonged cooling with less of the bulk.

DID YOU KNOW? ONCE INTERNAL BODY TEMPS REACH 40°C IT ONLY TAKES 30 MINUTES TO CAUSE BRAIN DAMAGE... OR WORSE.
